Climbing play structure with slide
VVZ-LEZ006-T

VVZ-LEZ006-T Climbing play structure with slide

The climbing play structure with slide is a multifunctional play element combining climbing, obstacle-based play and sliding. Children can access the structure using the climbing or rope walls and then descend via the slide or open slide. The varied play activities naturally support the development of strength, agility, movement coordination and overall physical fitness, while allowing several children to play together at the same time. The steel structure with a durable surface finish is designed for long-term outdoor use. The HPL climbing walls and other components, together with durable polyester ropes and stainless-steel fasteners, contribute to a long service life.

Specifications

The Climbing play structure with slide VVZ-LEZ006-T is certified according to STN EN 1176

Age Group:	3-14 years
Product Dimensions:	4.10 x 5.20 x 3.60m (LxWxH)
Max. Fall Height:	up to 2.20 m
Safety Surfacing Area:	9.00 x 8.90m (according to STN EN 1176-1)
Materials:	Galvanised and powder-coated steel, LDPE, HPL, polypropylene rope, stainless steel fasteners
Weight:	520 kg
